This isolated polynucleotide codes for the Staphylicoccus aureus KNA-uspendent amidotransferase C (ketC) protein (see ANM61464). It was contained from a library of clones of chromosomal DNA of S. aureus in E. coll. S. aureus WOH 29 strain containing the coll. S. aureus WOH 29 strain containing the full length rail gene is deposited as NOTME 1071. The inventor provides vectors compision the isolated polynucleotide, lost certain professions and antagonists. The rate polypeptide is used to treat an individual with the read of rate and the intagonist is used to treat an individual with the read of inhibit rate. Dispeptide is used to treat an individual with the read of inhibit rate. Dispeptide is used to treat an individual with the reducting rate. The comprises determining a mucleic acid sequence encoding rate and of a dispense related to expression or aciditie, or analysing for the presence or amount of rate in a sample. The fact or a fraguent or variation are vector expressing it is used to induce an immunication response, adequate to produce an anticoup and/or a frequence response the vector is delivered in vivo) and/or a frequence response the vector is delivered in vivo) and/or a frequence response the vector is delivered in vivo) and/or a frequence response the vector is delivered in vivo) and/or a frequence response the vector is delivered in vivo) and/or a frequence response the vector is delivered in vivo) for the active agence engineering the active agence and and add address in the delivered in vivo) for read intections of the upper response and and add address in a delivered in vivo) for read intections of the upper response and and address in a delivered disorders describe engagement and and address in the delivered and address and address and delivered disorders delivered disorders (e.g. engagement and disorders).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New DNA encoding S. aureus RNA-dependent aminotransferase C - used to diagnose and treat e.g. thyroiditis, lung abscess, infective endocarditis, secretory diarrhoea, cerebral abscess, conjunctivitis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ratt: RNA-dependent amidotransferase C; antibiotic; antibacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This isolated polynucleotide codes for the Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RNA-dependent amidotransferase C (RatC) protein (see AAW51459).
Novel ratB polypeptides of the invention (see AAW61457) ...ay
interact with ratC and/or ratA (see AAW61470) polypeptides to
form ratB:ratC and ratB:ratA heterodimers or ratB:ratA:ratC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          interornimers. Such heterodimers and heterornimers are useful in methods of the invention, particularly vaccine and using SCreening methods, e.g. for assays of ratB antagonists useful as antibacterial agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         empyaema; lung abscess; infective endocaratis; diarribea; splenic abscess; retroperitoneal abscess; cerebral abscess;

The prokaryotes used are settinging an encoded proteins. The prokaryotes used are previouslate, Pseudomonas aeruginosa and Enterococcus facealla. The invertion is also useful for the identification of potential new targets to faceal openent. The antisense nucleic acids can also be used to indicate the intervent of potential new targets and to obtain antibodies capable of binding to the expressed proteins. The precise of each of proliferation, to express these proteins, the proteins capable of binding to the expressed proteins. The proliferation are included for call sequence is also useful to screen in a wise variety of organisms. The present sequence encodes an analysis and assessing a will relation in a statistic and an encodes and analysis and an encodes an analysis and assessing an encodes and assessing and an encodes and assessing an encodes and assessing an encodes and assessing an encodes and assessing and an encodes and assessing and an encodes and assessing and an encodes and assessing an encode and assessing an encode and assessing an encode and assessing an enco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Carr GJ:

The invertion relates to antisense inhibitors of genes essentia, to prokaryotic cellular proliferation, their use in identifying the genes. Their use in the discovery of novel artiblotics, the essential genes translates and the encourage from the prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmodella upphi, Klebsiella preumoniae, Pseudomonas acusinosa and Enterococcus fecalis. The invention is also useful for the identification of potential new rangets for antiblotic development. The antisense nucleic acids can also be used to descript proteins used in proliferation, to express these proteins, and to obtain antibloties capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for poliferation in

This sequence represents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable and thus in preferably selected from a floppy or hard disx, random access memory (RAM) read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or indiantial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The polypeptides can also be used in a kit for the immunodatection of solutions as a sample. S.aureus is implicated in numerous human diseases, including ceilulitis, eyelld infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used to the polypeptides. The new DNA sequences can be used to the polypeptides. The new DNA sequences can be used to the polypeptides. The new DNA sequences can be used to the polypeptides. The new DNA sequences can be used to the polypeptides. The new DNA sequences can be used to the polypeptides.
                                                                                                                                                            These bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence.
                      9 "these bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9494 AIGCTITCLAAIGTGTTGGCCAITTCTTCCGIIICTICAGGAGAAATTGAAGTGTIGCA 9553

                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABB1737-ABB12073).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

capable of dececting 1000 or more genes from brosophila. The invention is useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence (ABL16176-ABL30511), in expressed DNA sequence (ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS7737-ABS773
                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Droscohila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     906 CIGGCIAAAAAAGTIGAIAGCCCTTACTTTTTTGGAAAAIGIICIIGITICTACATTT 965

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: This record contains 246 individual sequencing reads that have not been assentied into contligs. Runs of N are used to separate the reads and the order in which they appear is completely
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1332 3431: contig of 774 bp in length

                                                                                                                                                                                                                                              Louis,
                                                                                                                                                                                                                                                                                                                                                                                         Louis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence was finished as follows unless cinerwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (1.e., phred quality >-30); an attempt was made to resolve all sequencing problems such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOURCE INFORMATION:
The APCI-11 human BAC library was made from the blood of one male doctor, as described by Oscepawa.K., Wood,P.Y., Zhao,B., Frengen,E. Tatuco,M., Catanese,J.J. and de Jony,P.J. (1996) An improved appriach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resyen.com) or Pleter de Jong VECIOR: IPBACe3.6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTICE: This sequence may not represent the entire insert of this close. It may be shorter because we only sequence overlapping close sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RFI1-62F16, 2000 bp overlap.
Actual start of this clone is at base position I of RFI1-373H2;
actual end is at base position 63477 of RFI1-62F16.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The region from 20416 to 20419 is covered only by a por product

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This is a 'working drait' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                              Sequencing vector: plasmid; 100% of reads Chemistry: Dye-primer ET: 0% of reads chemistry: Dye-primer ET: 0% of reads chemistry: Dye-primer ET: 0% of reads assembly program: Phrap; version 0.990315 consensus quality: 171032 bases at least Q40 consensus quality: 171208 bases at least Q30 consensus quality: 171301 bases at least Q20 lineart size: 128000; agarose-fp insert size: 171876; aum.of-contigs Quality coverage: 12.05 in Q20 bases; sum-of-contigs Quality coverage: 12.05 in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 35.0%; Score 35.4; DB 2; Length 172076; Best Local Similarity 63.5%; Pred. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are uknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Clemistry: Dye-terminator Big Dye: 100% of reads Assembly program: Phrap; version 0.590329 consensus quality: 80482 bases at least 0.00 consensus quality: 83768 bases at least 0.00 consensus quality: 85890 bases at least 0.00

                                                                                                                                                                                                                                                                NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.htmi).
NOTE: This is a "working draft" sequence. It currently consists of 49 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
